

Types of System Calls

- **File Management** : are responsible for file manipulation such as creating a file, reading a file, writing into a file etc.
- **Information Maintenance** : handle information and its transfer between the operating system and the user program.
- **Process Control** : deal with processes such as process creation, process termination etc.
- **Device Management** : are responsible for device manipulation such as reading from device buffers, writing into device buffers etc.
- **Signalling** : are useful for interprocess communication. They also deal with creating and deleting a communication connection.

[illegible]
